## Helical Gears

Helical gears are one of the many types of powder metal gears Vision Quality Components manufactures. As you can see in the picture below the gear is produced with angled teeth.

One of the major advantages of a helical gear is torque capacity. Helical gear teeth are engaged more which causes them to run more smoothly and quietly. Tooth strength is greater because the teeth are typically longer. They are also highly durable and are ideal for high load applications. The load is distributed over several teeth resulting in less wear of the gear. Helical gears can be used for transferring power between non parallel shafts.

They excel in quietness and have less vibration and are able to transmit large amounts of force.

Helical gears are used in many industries, including automotive, oil & gas, textile, plastic, printing, compressors, conveyors, earth moving and food industries.

If you have an application where a helical gear may be a good candidate please contact Vision Quality Components and we will help you determine if it is a good fit for your application.

## **Performance Metrics**

### **On Time Delivery Performance**

**WE ARE EXTREMELY PROUD OF OUR TEAM!!**

Vision is excited to report a 4th QTR 2016 on-time delivery performance of 100%. Vision has maintained an average of 99.88% for the year of 2016. We believe this is critical to supplier-vendor relationship. We will continue to strive to exceed the demands of all our customers.

### **Survey Results**

Surveys are sent out each quarter to our customers asking how we are performing as a vendor. The 4<sup>th</sup> QTR results show that Visions' customer satisfaction is exceptional. We appreciate our customers taking the time to complete the surveys.

**PROUDLY MADE IN THE USA**

Vision Quality Components wishes you a healthy and prosperous NEW YEAR. We sincerely appreciate all our customers. We look forward to growing our business relationship and having an exceptional 2017!

Denny, Bob, Fred, Matt, Linda and Lesley
